

Geigel's 8 STEP PROCESS

A Multi-step application process that ensures your property will have maximum beauty and protection. Applied by Geigel certified contractors. These contractors are specially trained and know how to prepare your properties surface before apply the coating. Our system is only available and applied by

authorized Geigel contractors to insure the warranty offered. Here is what the process involves:

1. Inspection

We completely inspect the outside walls of your home for deterioration and suspect area.

2. Trenching

We trench around your home. The trenching will help eliminate foundation decay and will prevent moisture intrusion once The Water-Shield™ System has been applied.

3. Pressure Washing

Your entire property is pressure washed to remove dirt, stains, loose paint, foreign substrates, mold, mildew and algae. Once cleaned, areas in need of patching are revealed.

4. Repair/Patch

Deteriorated areas are patched with specially formulated patching and bonding materials to correct defects and create a sound and uniform surface area.

5. Masking

All doors, windows, landscaping and surface not to be coated are carefully covered to prevent overspray and provide the most professional-looking job possible.

6. Primer Applied

Our thick penetrating primer is applied to your property exterior.

7. Trim

Applied once the surface is coated, all trim areas are covered with a specially formulated, highly protective trim paint.

8. Finish Coat Applied

The Water-Shield Finish Coat is applied last. This finish chemically "fuses" itself to the primer for a second line of defense against the elements. Choose from our Heat Reflective Colors.

**Full service as needed. We repair or replace any damage wood trims, shingles, stucco. Call us for a free estimate!*

HIGH PERFORMANCE 3 STEP ROOF COATING WATERPROOF SYSTEM

GOT ROOF LEAKS?

Geigel's WATER-SHIELD™
